

NAME: _____

HOW SEEDS MOVE

Seeds move around our environments in many different ways. Today, you are going to observe two seeds closely to compare and contrast the strategies they use to find the right spot to grow. Can you spot all the similarities and differences?

Make sure you label the following parts of the seed:

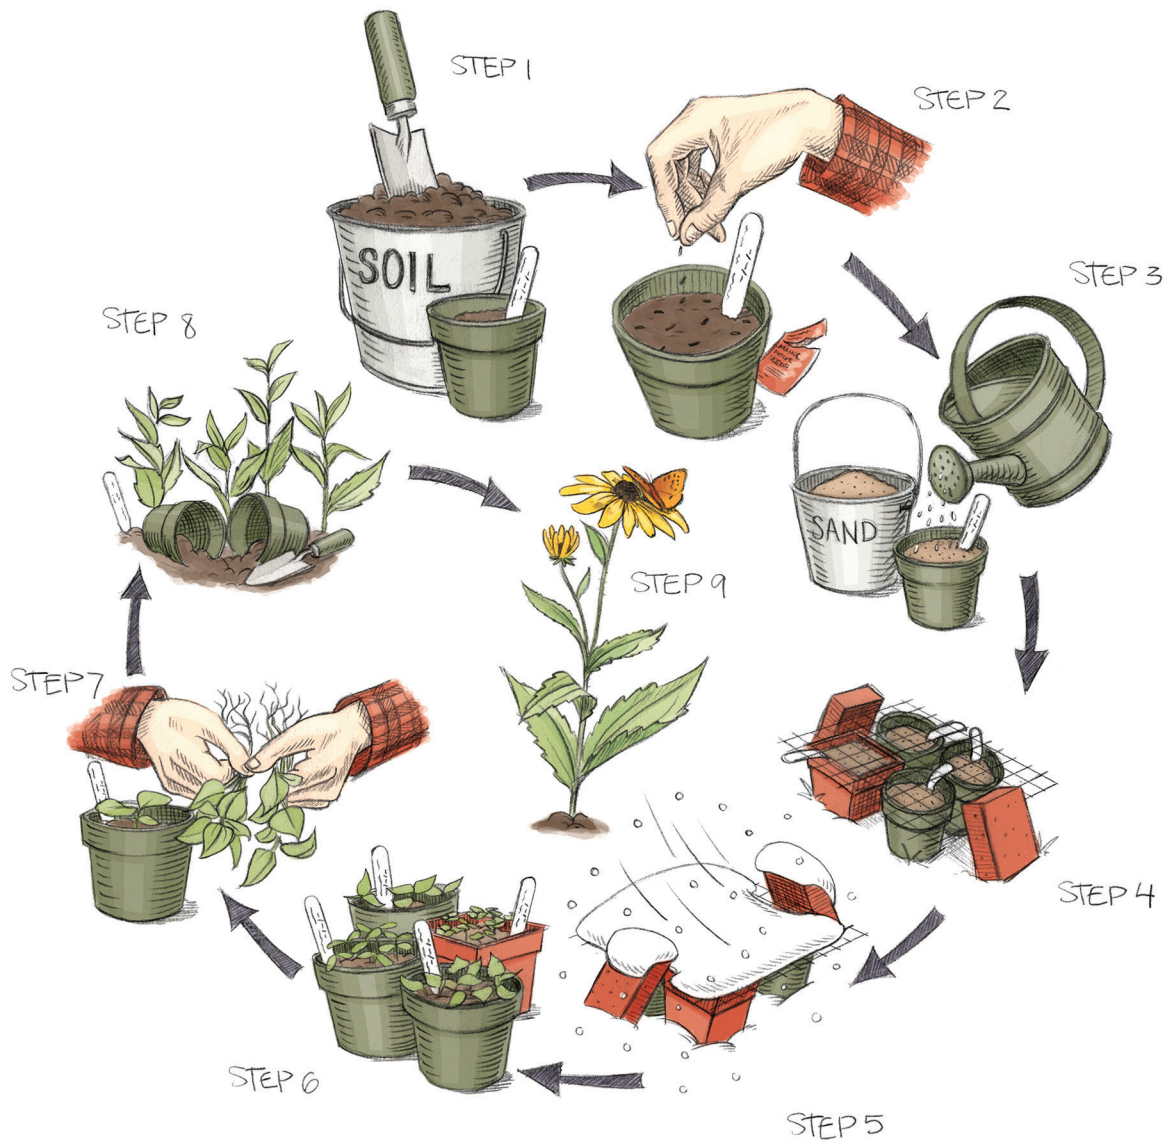

- The seed/embryo (the part that will grow into a new plant)
- The fruit (the dry or fleshy part around the seed that helps it move around)

REMEMBER! The fruit of the plant is not always edible!
